IBRAHIM OLUJIDE

Web Developer

About Me

Deeply invested in the life-long learning mentality, I'm a full-stack developer who carries a keen eye for design in an user-first approach. My focus is in creating responsive layouts on the JavaScript stack of React and NodeJS, and from my background as a teacher I'm well acquainted to bringing out solutions to complex problems.

- MongoDB
- Redux
- Mongoose
- Git
- Webpack

Work Experience

Project 1

SOCIAL NETWORK

Built a full stack social networking app with React, Node js, Mongo db, Graphql-express, Apollo client, and websocket. Created an extensive backend api with graphql server

Project 2

E-COMMERCE APP

A user friendly e-commerce Platform, built with the latest version of React and react hooks. All data was retrieved from fake product api

Project 3

CV-MAKER

An application designed to provide guidance to people while making their curriculum vitae.
It provides instant preview and a modern design that makes cv creation really easy

Education
